

Implement 1 Queue Using Stack &

2 Stack Using Queue

① Queue Using Stack

② Stack Using Queue

③ Explanation :-

Visualization

Real Implementation

- ① Push back()
- ② Q1 elements copy \rightarrow Q2
- ③ Q2 Elements copy \rightarrow Q1

```
class mystack() {  
    public  
        queue<int> a1;  
        queue<int> a2;  
    void push(int x) {  
        while (!a1.empty()) {  
            a2.push(a1.front());  
            a1.pop();  
        }  
        a1.push(x);  
        while (!a2.empty()) {  
            a1.push(a2.front());  
        }  
    }  
}
```

All the above
steps are
covered here

Visualization

Implementation

push steps

- ① copy $S1 \rightarrow S2$
- ② $S1.push()$
- ③ copy $S2 \rightarrow S1$

pop steps

$empty() \rightarrow S1.empty()$

$pop \rightarrow S1.pop()$

- ② $int pop() \{$
 $int an = S1.pop()$
 $S1.pop()$
 $return an$

- ③ $int peek() \{$
 $return S1.top()$
 $\}$

- ④ $bool empty() \{$
 $return S1.empty();$
 $\}$

front

$front = S1.top()$

$myQueue() \{$

$stack <int> S1$

$stack <int> S2$

- ① $void push(x) \{ (int x)$
 $while(!S1.empty()) \{$
 $S2.push(S1.top())$
 $S1.pop()$
 $\}$
 $S1.push(x)$
 $while(!S2.empty()) \{$
 $S1.push(S2.pop())$
 $\}$
 $\}$
